TE KĀHUI RARAUNGA

TE WHATA

The background of the slide is a photograph showing a pair of hands weaving a basket. The hands are positioned in the upper right, with one hand holding a piece of white thread and the other guiding it into a woven structure. The basket itself is made of light-colored, fibrous material, possibly paper or natural fibers, and has a complex, crisscrossing pattern. The lighting is warm and soft, highlighting the texture of the weaving. The overall tone is artistic and craft-oriented.

Census 2018

Data limitations

The data on this page are estimates based on 2018 Census data and the use of statistical methods. For many purposes, this data provides a more relevant and up-to-date picture than continued use of 2013 Census iwi data. The quality of this data ranges from moderate to poor depending on how the data is used. Care is required when using this data.

This data is useful to:

- Provide a more recent representation of your iwi than the 2013 Census
- Compare to the Māori descent population

Use caution when:

- Comparing with 2013 Census data

As of 2 May, 87% of Māori with ages 12 and over in Grafton had two doses of the Covid-19 vaccine.

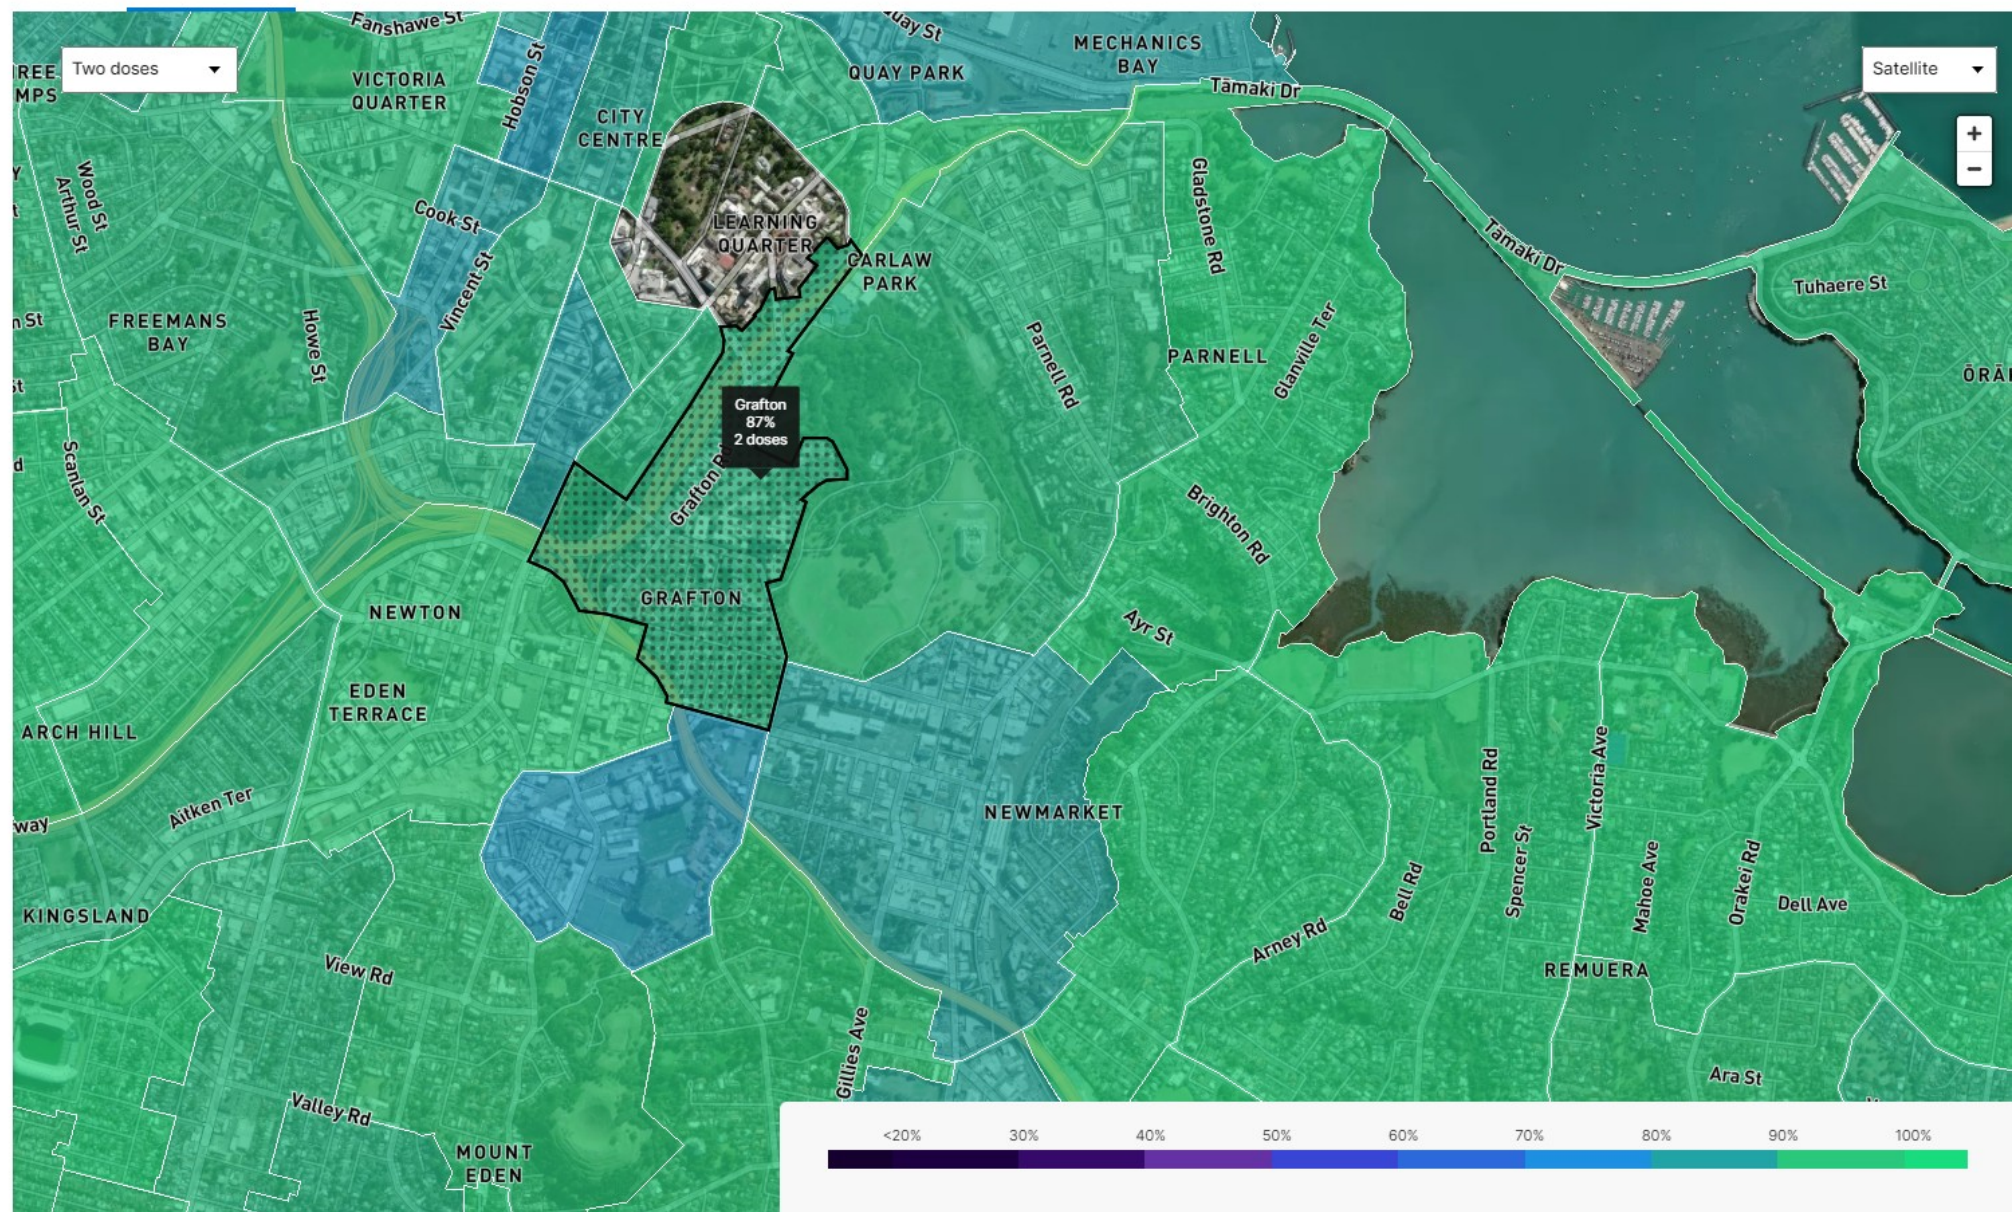

Vaccination rates for Māori are influenced by proximity to a vaccination centre, priority vaccination groups and Māori health equity.

Māori with ages 12 and over in Grafton

0 doses	1 dose	2 doses	1x booster	2x booster
9%	91%	87%	67%	32%

Total population with ages 12 and over in Grafton

0 doses	1 dose	2 doses	1x booster	2x booster
9%	91%	90%	78%	41%

Access and willingness

This dashboard provides some insights on potential barriers to vaccination uptake in our communities.

Using different datasets we have created a 'Willingness' score and an 'Access' score.

If the 'Willingness' score is low, then those areas might benefit from more trusted communicators and educators on why vaccinations are important.

If the 'Access' score is low, then those areas might benefit from mobile clinics or more street by street vaccination response.
